PROFILE

Platform Engineer with six years in support, cloud and infrastructure, specialising in building and operating production systems across Azure, AWS, and GCP.

Over the last three years, I have designed and delivered end to end platforms including Kubernetes environments, event driven data pipelines, MLOps systems, and multi tenant SaaS applications used in live client environments.

My focus is on systems that are reliable, observable, and auditable by design, with clear ownership from infrastructure through to application delivery and maintenance.

CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert	2025
Certified Kubernetes Administrator (CKA)	2025
Microsoft Certified: Azure Administrator Associate	2024
Microsoft 365 Certified: Enterprise Administrator Expert	2024
AWS: DevOps Engineer Professional	In Progress
CompTIA Network+	2024

WORK EXPERIENCE

Freelance Platform Architect	Oct 2025 - Present
► Customer Ordering & Delivery Management System	
- Client was running their entire ordering operation through WhatsApp chats and Snapchat DMs, with insufficient structure, tracking, or automation. - I led the engagement end to end, from initial problem discovery through to defining the solution, agreeing scope, and delivering the full system independently. - Designed and built a web-based ordering platform to replace the manual process of managing order confirmations & assignments, ETA enquiries, which resulted in a reduction of admin workload by around 85 percent while introducing full order visibility and control. - Owned the full codebase and system and database architecture, including backend logic, frontend admin dashboard, and API integrations.	

- Integrated WhatsApp Business Cloud API for automated communication between operation team, drivers and customers. As well as utilising Google Routes API for real-time delivery ETAs.
- Implemented core system protections including duplicate order prevention, idempotent processing, and full order state tracking to ensure reliability under real usage, along with input validation and operational constraints such as postcode format enforcement and configurable delivery radius rules based on defined postcode prefixes.
- Built an admin interface, granting the client full visibility and control over operations from order intake through to fulfilment, including queue management, order reassignment, and completion workflows to support day to day operations without manual coordination.
- Hosted on GCP. Handled domain setup, tenant & resource level security and SSL, while keeping running costs low

► QOF Opportunity Engine (NHS / Primary Care)

- Built a five-screen tool that pulls public NHS QOF data for every GP practice in England and shows where practices are leaving money on the table at indicator level.
- Covers PCN exploration, practice-level financial ranking, year-on-year comparison, and impact modelling for upcoming QOF changes.
- Used as a sales and planning tool by a primary care services client to support GP practice conversations.

Food Operations & Margin Intelligence Platform

- Planned and built a multi-tenant SaaS covering the full food operations workflow, covering ingredient purchasing, production runs, finished goods pricing and waste, and sales across multiple channels (e.g. Deliveroo, Just-Eat, Uber-Eats and POS systems)
- The costing engine tracks FIFO lot consumption and weighted average unit cost per SKU. Every cost figure traces back to the original lot purchase enabling point in time product costs and profits.

► Legislative Compliance Engine

- Built a compliance engine that ingests UK legislation site (legislation.gov.uk), normalises and stores it in a structured data model, and extracts auditable data protection obligations which are mapped directly to enforceable cloud constraints.
- Designed the system to support both existing and greenfield environments, allowing clients to assess their current compliance posture or generate a fully compliant Azure tenant architecture from a guided questionnaire. The system also produces Terraform configurations and implementation steps (via portal) aligned to their data handling and cost or performance requirements.

Technical Delivery Engineer

Sep 2024 - Oct 2025

Ekco

- Provisioned Azure virtual desktop and compute infrastructure via Terraform for multiple client environments. Wrote the IaC, ran the deployments, maintained the environments.
- Wrote PowerShell scripts for identity lifecycle: flagging expiring secrets, auditing licence assignments, generating compliance reports. Replaced a manual weekly process.

- Cloud security monitoring via Microsoft Defender. Investigated alerts, triaged incidents, led RCA sessions and applied CVE patches on Azure VMs during out-of-hours on-call.

IT Support Engineer

Dec 2023 – Sep 2024

IT-Logik

- Azure incident triage and root cause analysis. Found the underlying cause rather than just applying fixes, which cut repeat incidents over time.
- Citrix platform administration and mailbox migrations from on-premises Exchange to Microsoft 365.

Earlier Career – IT & Cloud Operations

Dec 2021 – Dec 2023

- Azure and M365 support across several organisations. Work covered incident triage, Azure Virtual Desktop troubleshooting, PowerShell scripting for ops tasks, and backup and DR.

SKILLS

Cloud

Azure (AKS, Entra ID, Policy, Networking), AWS (EKS, VPC, IAM, S3, ECS), GCP

IaC & CI/CD

Terraform, Bicep, GitHub Actions, Azure DevOps, Jenkins

Observability

Prometheus, Grafana, CloudWatch, App Insights, Log Analytics, OpenTelemetry, Sentry, Loki

Languages

Python (primary), PowerShell, Bash, Node.js

Kubernetes

Kubernetes, Docker, Helm, FluxCD, GitOps

Data & ML

Apache Kafka, ETL, MLflow, Airflow, Azure Data Factory, Databricks, PostgreSQL, Python

Security

Azure Policy, Microsoft Defender, RBAC, Key Vault, GDPR/NCSC, DLP, Data Classification

AI

Local LLM deployment (Ollama), RAG, Multi-Agent Workflows, Claude Code, GitHub Copilot, OpenAI API

PROJECTS

► Continuous Training MLOps Pipeline (AWS)

Tools: Airflow, MLflow, BentoML, Kubernetes, FluxCD, Terraform, Docker, AWS (EKS, ECS, VPC, S3, Security Groups), Kubernetes Ingress, Secrets Management, Prometheus, Grafana, CloudWatch, CI/CD

► Compliance Engine & Infrastructure Generator

Tools: n8n, Terraform, Python, UK Legislation APIs, Infrastructure as Code, Azure Policy, Compliance Modeling

► SQL Data & Analytics Pipeline

Tools: SQL Server, Python, CSV Processing, BI Integration, AI-Assisted Analytics

Trusted Research Environment (Azure)

Tools: Azure AKS, Azure Policy, Private Endpoints, Network Isolation, Logic Apps, Entra ID, GitHub Actions, Terraform, GDPR Compliance, NCSC Principles

► Location & Market Intelligence Engine

Tools: Python, Geographic Data APIs, Market Analysis, Scoring Models, Data Provenance

🔄 Event-Driven Streaming ETL Platform (Kafka)

Tools: Apache Kafka (Topics, Partitions, Consumer Groups), Python, Polars, PostgreSQL, Docker, Kafka CLI, ETL Tooling, Tableau, Prometheus, Grafana

🔄 Node.js Azure Deployment Project

Tools: Node.js, Express.js, Azure App Service (Linux), Jenkins Pipelines, Deployment Slots, GitHub, CI/CD Automation, Infrastructure-as-Code Principles, App Insights, Log Analytics

EDUCATION

Chemical Engineering Diploma

2018

University of Teesside
